

Learning Management System

An excellent way to receive online training!

GDOT's learning management system (LMS), hosted by Docebo, provides a centralized hub for organizing and managing various aspects of learning, including content creation, course enrollment, assessments, progress tracking, and communication between instructors and learners.

We invite first responders and the traffic incident management (TIM) community to experience the platform firsthand. We have 6,000 users, 38 courses available, and 24x7 access. The LMS allows you to explore its user-friendly interface, access training modules, and leverage it to revolutionize your professional development. Together, let's empower first responders with the knowledge and skills they need to save lives.

The LMS portal has training content in the areas of National Incident Management System (NIMS), Incident Command Railroad Training, TIM Responder Safety for Law Enforcement, Electric Vehicle Safety, professional development training, and much more. These will be readily accessible to you by a quick login to the LMS platform after your user profile has been created.

You can seamlessly access the LMS through the Traffic Incident Management Enhancement (TIME) Task Force website by clicking on the "E-Learning" tab in the learning center section. Scan the QR code to the right to go to the website.

Are you out in the field? We have you covered with the intuitive "Go.Learn" mobile app by Docebo. Simply download the Go.Learn app via your iOS or Android device, and you will be off to a great and continuous learning experience. Start your journey to free online responder training by emailing us at TIM_Training@dot.ga.gov.
